

WOLFDEN

***Developing one of North America's
Highest Grade Base Metal Deposits***

Disclaimer

This presentation may contain "forward looking information" within the meaning of Canadian securities legislation, which are based on the opinions and estimates of management and are subject to a variety of risks and uncertainties and other factors that could cause actual events or results to differ materially from those projected in the forward looking information. Such risks and uncertainties include, but are not limited to, risks associated with the mining industry, the risk of commodity price and foreign exchange rate fluctuations, the ability of Wolfden to fund the capital and operating expenses necessary to achieve the business objectives of Wolfden, as well as those risks described in public disclosure documents filed by Wolfden. Due to the risks, uncertainties and assumptions inherent in forward-looking information, prospective investors in securities of Wolfden should not place undue reliance on these forward-looking information.

This presentation has been completed by Wolfden. Certain corporate projects referred to herein are subject to agreements with third parties who have not prepared, reviewed nor approved this presentation. The presentation is not intended to reflect the actual plans or exploration and development programs contemplated for such projects.

Don Hoy, P. Geo., and Ron Little, P. Eng. are the Qualified Persons for the information contained in this presentation and is a Qualified Person within the meaning of National Instrument 43-101.

For further information on the technical data provided in this presentation, including the key assumptions underlying the mineral resource herein, refer to the Sedar filings as listed below:

Unless otherwise stated, the financial information in this presentation is as reported in the latest quarterly filings or press release related to the financial information of the Corporation.

Wolfden First Mover in Maine

- In 2013, Maine started process to reform mining laws to allow underground mining only
- November 2017 New Mining Code enacted - Bill LD820
- 1980's was the last significant exploration
- **Pickett Mountain is one of the highest-grade undeveloped volcanogenic massive sulphide deposits in North America that remains open for potential expansion**
- **Jan 7, 2019 Mineral Resource Estimate**
 - 2.05 Mt at 19.32% ZnEq of Indicated*
 - 2.03 Mt at 20.61% ZnEq of Inferred*
 - (ZnEq cut-off grade of 9%)*

Tectonic Map of the Appalachians

- Ganderia Terrain endowed with high-grade Zn-Pb-Cu-Ag massive sulphide deposits
- **BATHURST CAMP 349 Mt**
Worlds Largest VMS District
Production 134 Mt
- **BUCHANS CAMP 112 Mt**
Production 16 Mt
- **PICKETT MOUNTAIN**
Proximal to other camps and very much underexplored
- **2017 New Maine Mining Code**

PM-17-002
Whole Dry Core
Banded & replacement
pyrite, sphalerite, galena
& chalcopyrite

Global Comparison to other Zinc deposits

Project	Company	Tonnage (MM)	Zinc (%)	Zinc (MMlb)	ZnEq (%)	ZnEq (MMlb)	ZnEq Rank	Value (US\$/t)	Value Rank
Kipushi	Ivanhoe Mines Ltd	15.7	29.8%	10,275	34.5%	11,916	3	\$876	1
Izok Lake	MMG Ltd	14.6	13.0%	4,184	21.9%	7,046	8	\$555	2
Pickett Mountain	Wolfden Resources	4.1	10.4%	938	20.9%	1,878	30	\$529	3
Prairie Creek	Norzinc Ltd	15.8	9.2%	3,211	19.4%	6,723	9	\$491	4
High Lake	MMG Ltd	14.0	3.8%	1,173	14.3%	4,422	17	\$363	5

Seal Zinc	Aston Bay Holdings Ltd	1.0	10.2%	226	11.1%	245	47	\$282	10
Group Average (total dataset = 50)		23.1	5.3%	2,469	9.2%	4,108		\$232	

In-situ ZnEq value based on Cormark's long-term metal pricing including US\$1.15/lb zinc, US\$1.00/lb lead, US\$3.00/lb copper, US\$1,250/oz gold, and US\$15.00/oz silver. Source: Company disclosure and Cormark Securities Inc.

“Growth potential aside, Pickett Mountain’s high-grade tenor already positions Wolfden as a meaningful player relative to zinc-developer peers on a contained metal (1.9 Blb ZnEq) and in-situ value per tonne basis (US\$529/t)”

Stefan Ioannou – Analyst Cormark Securities, Jan 8/19

“Of these projects, Pickett Mtn. arguably has a favored location with excellent infrastructure and could be one of the most straight forward to develop”

- Discovered in 1979 by Getty Mines Ltd and called Mount Chase; Diamond drilling, metallurgical work, environmental studies and PF studies 1979 – 1984
- Chevron Ltd.- Deeper drilling, metallurgical work 1984-1989
- Easy year round access via State Highway 11 and three miles of forestry road
- Access to Power Line – 11 km
- No population living within miles of the project
- Timber sales generates some revenue from the Property

Airborne Geophysics completed over the main deposit and the larger grid

Other similar targets identified within the same favourable package of rocks

Trenching and drill testing of targets in H1 2019

NI 43-101 resource Completed Q1 2019

9% ZnEq	2,030,000	10.98	4.35	1.20	111.45	0.92	4.00	20.61
11% ZnEq	1,740,000	12.06	4.77	1.24	121.42	0.97	4.00	22.39

Isometric View of Main Zone Lenses

Looking NW Azimuth 327
(Straight on)

Looking WNW Azimuth 282
(at 45 degrees)

Footwall Zone Discovery

- The Footwall Zone (FWZ) appears to be 180 metres from the East Lens (to the North)
- Only 2 historic drill holes (G-6 and G-97) were deep enough to intersect the FWZ above and below hole PM-18-031

Expansion Potential – Geochemistry/Geophysics

Well defined soil anomalies of Zn-Pb-Cu along strike

Coincident HLEM conductors along strike

Down-hole EM surveying in progress

Drill testing of Geophysical Targets near and away from Main Zone to follow

Exploration Upside – IP Targets

- Main Zone Lens correlate well with high chargeability anomalies
- Other similar anomalies to the North and West will be drill tested as shown in black areas

- The East & West lenses of the massive sulphide deposit are coincident with a well-defined Zn +Pb+Cu soil anomaly
- There are 2 soil anomalies located up-ice and to the north of the known deposits that have not been drill tested
- Some soil anomalies also coincident with geophysical targets

Preliminary Metallurgical Results

PRODUCT	WEIGHT	GRADE					% DISTRIBUTION				
		t/d	Cu(%)	Pb(%)	Zn(%)	Au(g/t)	Ag(g/t)	Cu	Pb	Zn	Au
ORE FEED	100.00	1.60	4.80	12.60	0.94	84.4	100.0	100.0	100.0	100.0	100.0
COPPER CONCENTRATE	5.36	23.10	3.40	2.82	2.31	429.7	77.4	3.8	1.2	13.3	27.3
LEAD CONCENTRATE	7.31	0.35	50.90	8.28	2.63	457.2	1.6	77.5	4.8	20.4	39.6
ZINC CONCENTRATE	20.85	0.86	1.50	53.00	0.56	45.0	11.2	6.5	87.7	12.5	11.1
PLANT TAILINGS	66.48	0.24	0.88	1.19	0.75	27.8	9.8	12.2	6.3	53.8	22.0

- **Preliminary metallurgical work (1984) on drill core produced 3 floatation concentrates with recoveries of 88% Zinc, 78% Lead and 77% Copper**
- These are excellent recoveries in comparison to most volcanogenic massive sulphide deposits in the North American Appalachians.
- Further metallurgical and base line studies are planned for 2019

- ✓ The Pickett Mountain one of the highest-grade undeveloped VMS deposits in the World
- ✓ Excellent potential to expand the deposit, grow the recent discovery of the footwall lens and discover other lenses and satellite deposits on the property and surrounding belt
- ✓ Preliminary metallurgical work yielded recoveries of Zinc (88%), Lead (77%) and Copper (74%) which are excellent for a VMS deposit in the Appalachians. Other studies in 2019
- ✓ The Maine Volcanic Belt neighbours the well endowed Bathurst Camp in New Brunswick
- ✓ Entire Belt is very much underexplored compared to Bathurst
- ✓ 2017 Maine enacts New Mining Laws
- ✓ Local community very supportive on ongoing exploration

Pickett Mountain Focus

- +14,000 m Drilling Completed to date in 35 holes
- Down-hole EM Surveying underway – results pending
- Initial Resource Estimate statement released, report pending
- Planning underway for 2019 expansion & infill drilling and technical studies

Other Drill Programs

- Positive Drill Results from Orvan Brook Property next to Trevali's Caribou Mine NB – Potential to build significant resources
- Nickel Island & Rice Island, Manitoba – high-grade Ni-Cu-Co deposits, planned for 2019

Evaluate prospective base metal opportunities in North America

Website: www.wolfdenresources.com

Tetagouche Projects including Orvan Brook - Bathurst, NB (Zn, Pb, Cu, Ag)

Rice Island Project – Manitoba (Ni, Cu, Co)

Nickel Island Property – Manitoba (high-grade Ni with potential PGE's)

Tetagouche Project – Bathurst, NB

- Wolfden has a dominant land position in the prolific VMS Bathurst Camp
- 100% interest in 6 historic massive sulphide deposits

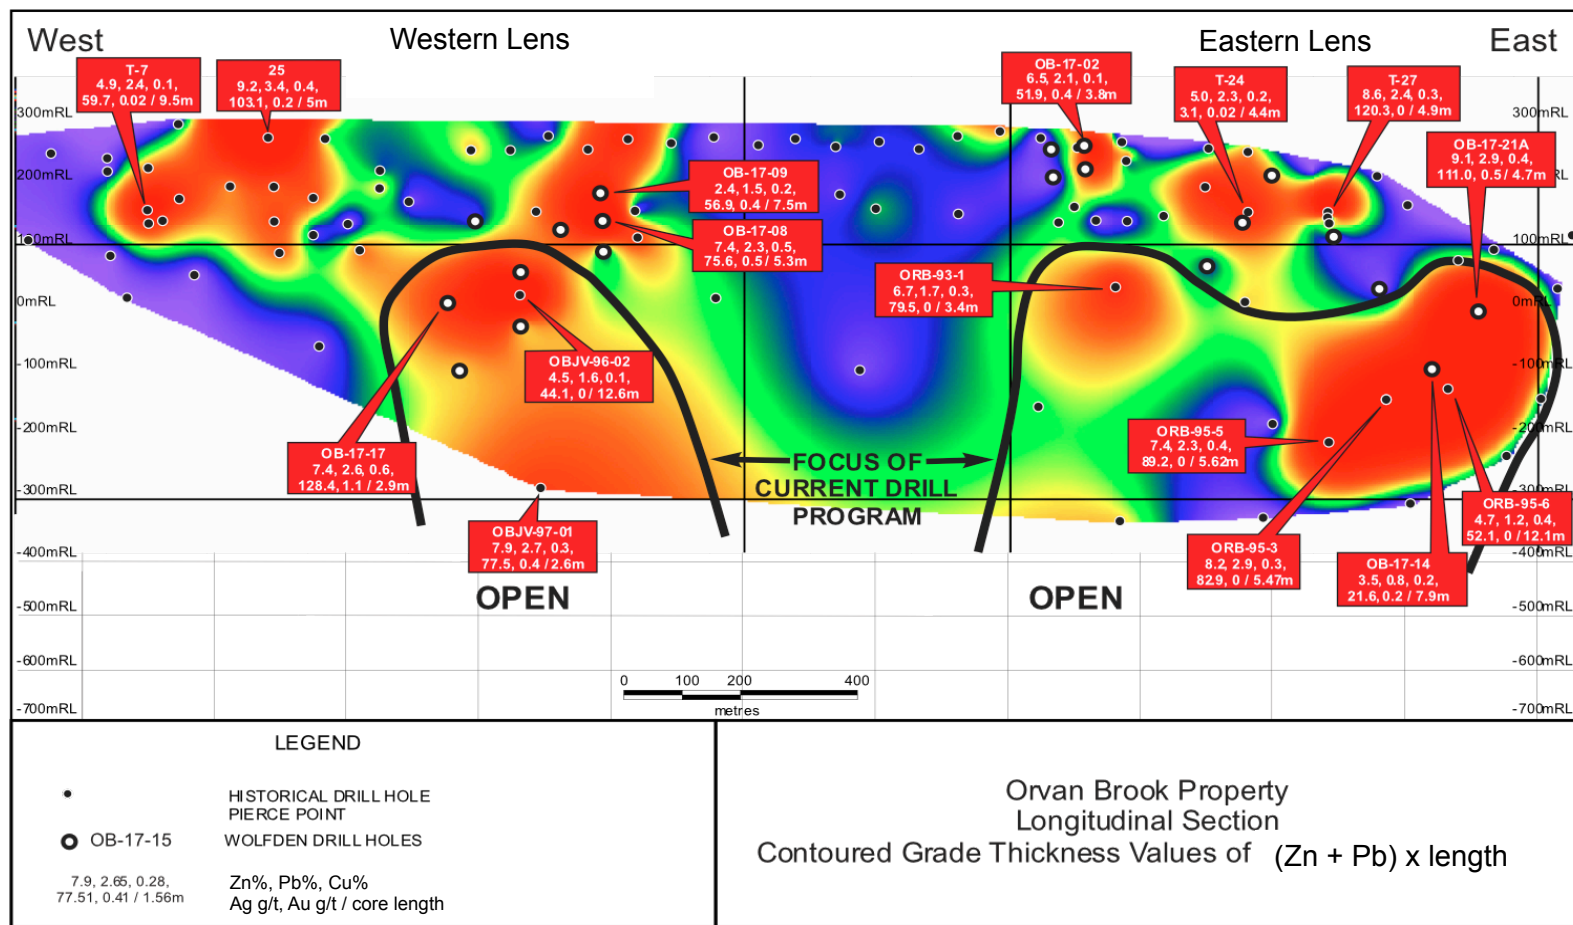

Orvan Brook – Geology Plan Map

Banded fine-grained massive sulphides with locally high grade zinc values as per photo

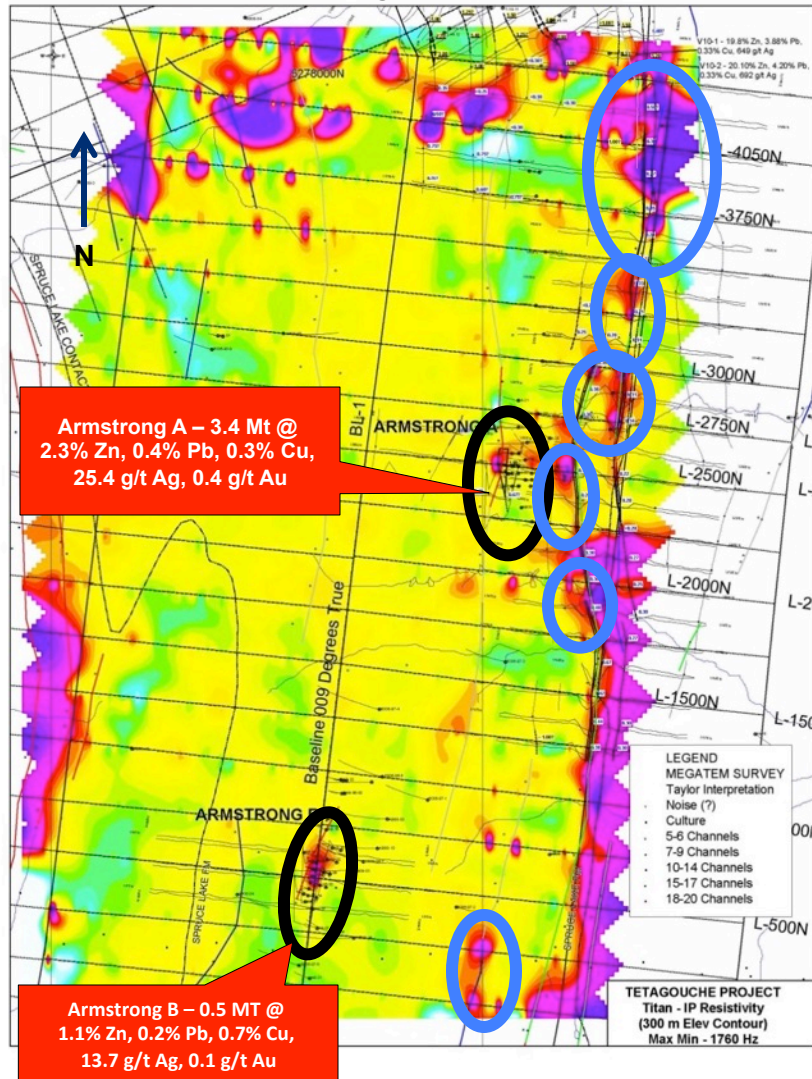

- Orvan Brook is 2.3 km and open along strike and at depth

Vertical Longitudinal Drill Section

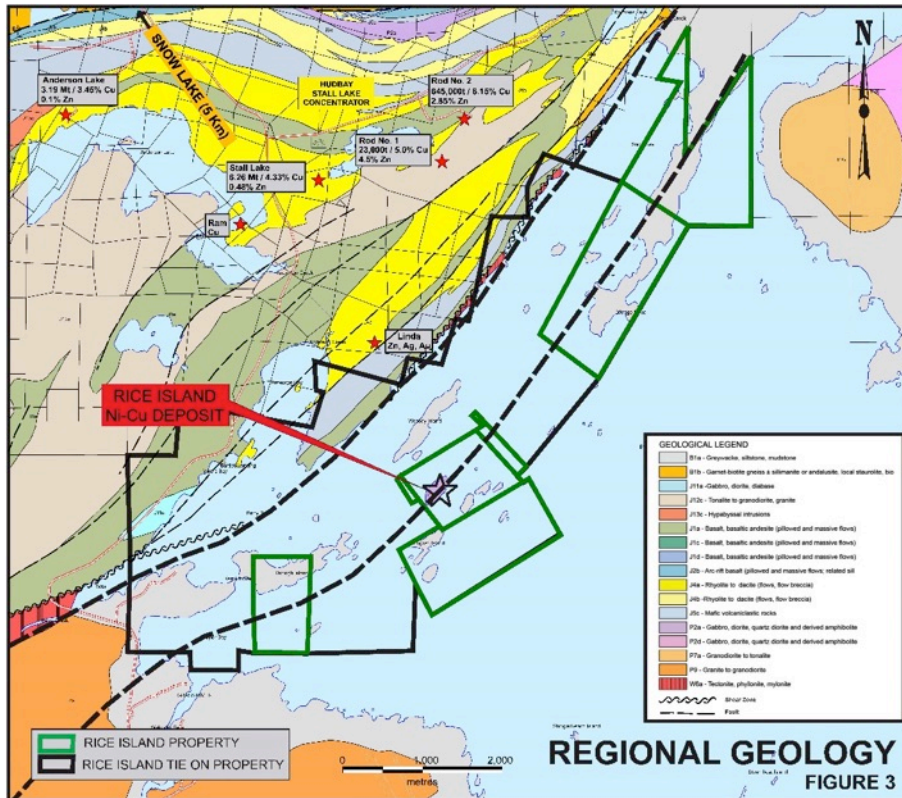

- Highly prospective East and West Zones warrant additional drilling
 - Infill Drilling around widely spaced holes could significantly increase resources
- Deeper Zones - up to 8.2% Zn, 2.9% Pb, 0.3% Cu over 5.5m**

Titan IP Resistivity Map

- The Armstrong A & B deposits exhibit bullseye-shaped IP anomalies (resistivity lows)
- Both are located to the west of the Orvan Brook Horizon and are not believed to be the bedrock source of the high-grade massive sulphide boulders located down-ice and to the east. Some of those boulders are also lower grade implying that some of the boulders on the neighbouring ground to the east are from Armstrong A & B
- High Priority Drill targets – (Blue Ellipses) a series of IP anomalies coincident with the Orvan Brook Horizon with a similar signature to the Armstrong A and B deposits

Geology Map of Snow Lake - Flin Flon

Targets on Geophysics

- 2,600 hectare property close to infrastructure
- Stall Lake mill 8 km NW of Rice Island
- Rice Island intrusion within a NE structure

- Rice Island Ni-Cu-Co deposit: exhibits magnetic high & conductors
- Priority Targets are similar signatures on both NE structures

Rice Island - Drill Results (2015-16)

- Wolfden completed 6,676 metres of drilling in 29 drill holes;
- Significant Ni-Cu-Co was intersected in all 25 of the holes in the historical deposit locale including: 3.8% Ni, 1.3% Cu, 0.17% Co over 9.90 m and; 3.3% Ni, 1.3% Cu, 0.13% Co over 12.4 m

- 10 Drill holes (yellow) all hit the Ni-Cu-Co mineralization and extended the dike 300 m SW of the Rice Island Deposit – See 2017 Drill Results
- Additional conductors to the SW indicate further expansion potential

- Magmatic Ni-Cu-Co deposit within Flin-Flon Snow Lake greenstone belt in Manitoba
- Main massive zone in addition to a feeder/conduit zone that remains open along strike with conductors

Rice Island – 2017 Drill Results

- 10 Drill holes (yellow) all hit the Ni-Cu-Co mineralization and extended the dike 300 m SW of the Rice Island Deposit
- Open to the SW with additional conductors

Rice Island - Main Zone Drill Targets

Target 1

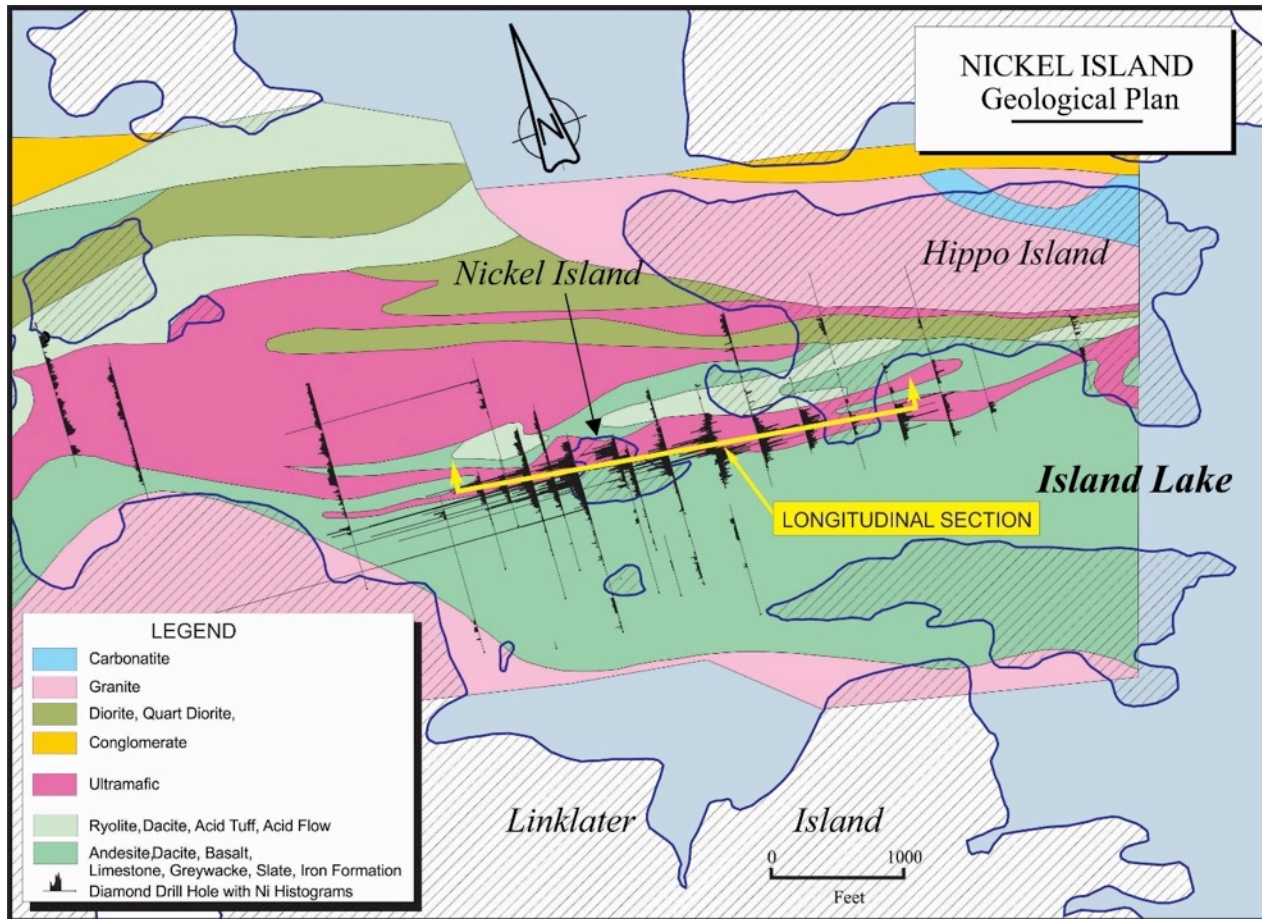

SW extension of the of the conductors along the Rice Island Deposit trend for 500 m

Target 2

Parallel strong magnetic high and series of conductors to NW of Rice Lake Deposit

- Drilling can be completed from land given the close proximity of the anomalies to the shoreline

Nickel Island Property

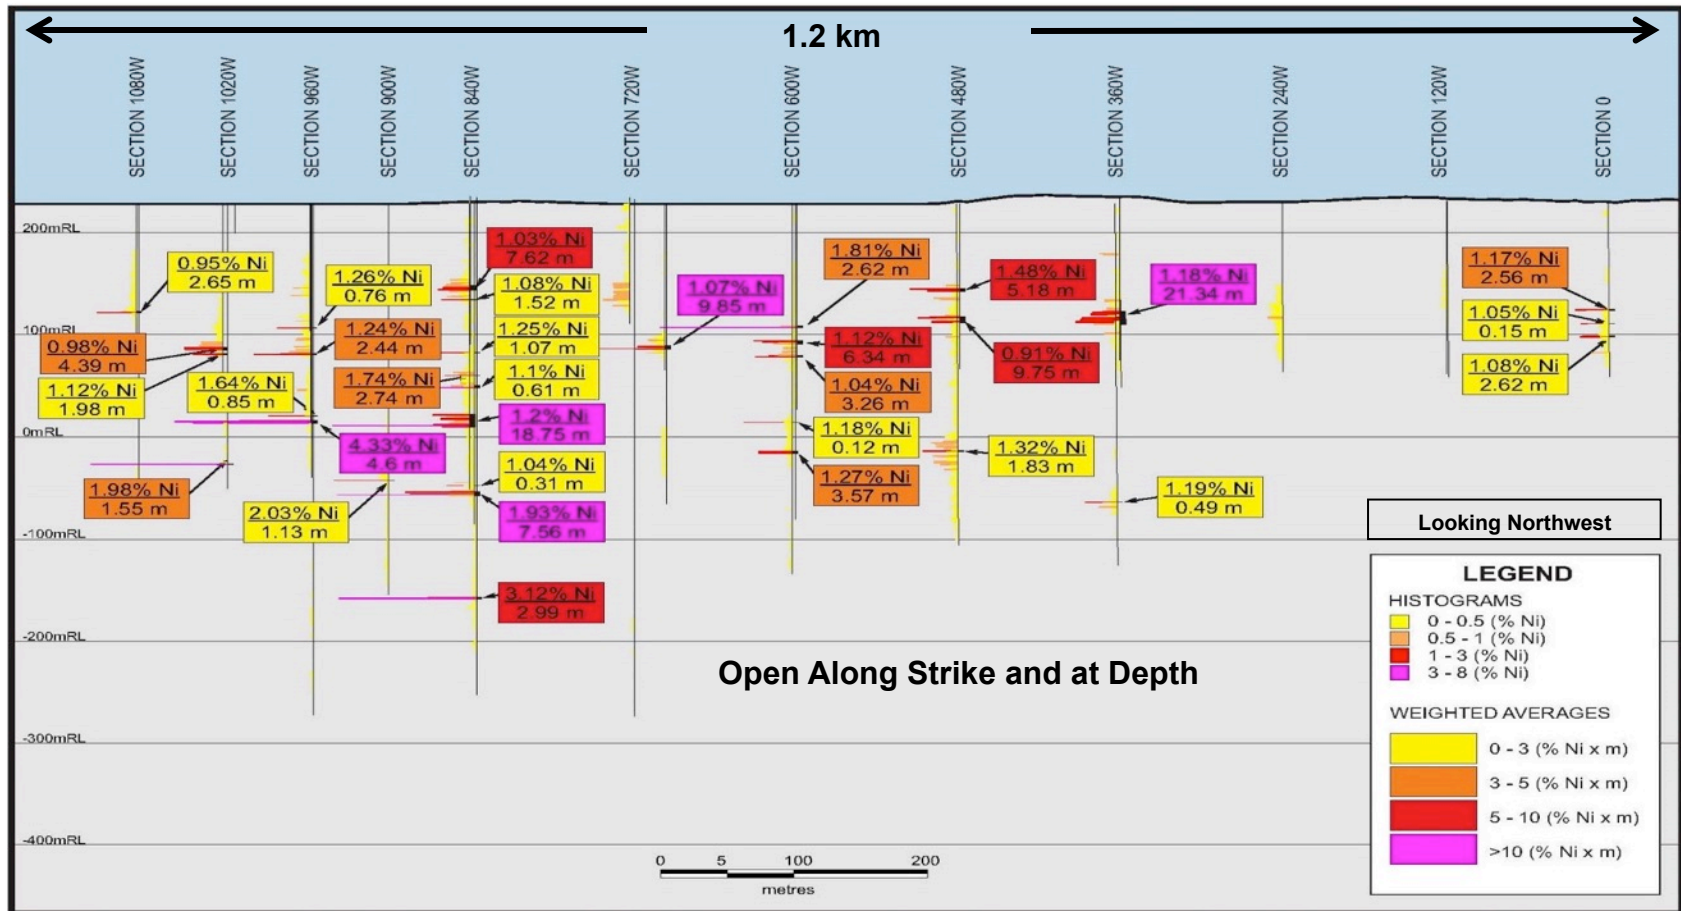

- Nickel Island last drilled 50 years ago by Inco (1957-1958)
- District Scale Property > 6,000 hectares

- Presence of appreciable “**Kambalda-type**” mineralization with stringer, disseminated, net-textured and semi-massive nickel-copper sulphides hosted within spinifex-textured ultramafic flows and intrusions (komatiites)

Nickel Island, Manitoba – Longitudinal Section

WOLFDEN

- Kambalda-style Ni-Cu mineralization hosted within komatiites
- Historic Ni intercepts include: **4.6 m at 4.3%** , **2.9 m at 3.1%**, **7.6 m at 1.9%** and **21.3 m at 1.2%**
- Nickel Island >1 km in strike and deposit is open along strike and at depth

- **District Scale Opportunity**

- Two large target areas from airborne geophysics (VTEM)

- **North Target Area**

- includes Nickel Island and other conductors
- Two Priority 1km drill targets SE of Nickel Island deposit with similar geophysical signature

- **South Target Area drill targets**

- 10 km magnetic feature
- Associated conductors
